

Leeloo MVP Product Brief

Concept Overview

Leeloo is an AI-powered personal assistant inspired by the 1997 film *The Fifth Element*. Just as the film's Leeloo represents the world's need for empowered, capable women, this AI version is designed to empower working mothers by seamlessly integrating personal, family, and professional management into one conversational platform.

Leeloo's mission is to help women stay organized, focused, and spiritually inspired, acting as both a personal assistant and a motivational companion.

Core MVP Goal

To create an intelligent, conversational assistant that helps busy moms manage personal and professional life through natural dialogue — with a focus on actionable task execution, scheduling, and spiritual encouragement.

Target User

- Working mothers juggling family, work, and personal responsibilities
 - Users seeking a low-cost, high-efficiency alternative to a human assistant
 - Christian women who value faith-based motivation and balance
-

MVP Core Features

1. Conversational AI Engine

- Natural, human-like conversation via voice or text
- Triggered by the command: **"Hey Leeloo"**
- Understands and interprets user requests such as tasks, reminders, messages, and calendar events

2. Parent Dashboard

- Central command hub where all tasks are stored
- Displays:
 - All active and completed "To-Dos"
 - Associated tools (e.g., Gmail, Calendar, Instacart)
 - Execution dates and notes
- Allows the user to approve, edit, or delete tasks

3. Task Automation

- Executes multi-step actions like:
- Writing and scheduling emails
- Creating reminders or appointments
- Adding items to online carts (Amazon, Instacart, etc.)
- Integrates with productivity tools (e.g., Google Workspace, Apple Calendar, Notion)

4. Multi-User (Parent + Child Mode)

- Children can send Leeloo voice or text reminders for their parent
- All child requests appear on the parent dashboard for approval
- Leeloo offers gentle “life lessons” when interacting with children (e.g., responsibility, kindness)

5. Context Awareness

- Leeloo listens to conversations (opt-in) to capture actionable details like:
- Dates
- Appointments
- Tasks
- Converts detected items into tasks or reminders
- As if you had someone, a personal assistant, working right next to you listening to everything you are saying. You would give Leeloo "hours of operation (a timeframe to listen)."

6. Memory + Personalization

- Learns user routines, preferences, and relationships over time
- Adapts reminders and tone based on user habits
- Builds emotional intelligence for natural conversation

7. Faith-Based Encouragement

- Delivers daily Bible verses or motivational Christian affirmations
- Offers prayers or faith-based reflections upon request

Personality & Tone

- Compassionate, proactive, and faith-centered
- Balances professionalism and warmth
- Uses short, uplifting messages and optimistic energy
- Example tone:
- “Got it, Susana! I’ll add that to your schedule and remind you tomorrow morning.”
- “Don’t worry — God’s got you today. Here’s a verse that might lift your spirit: Philippians 4:13.”

Technical Scope (for Developers)

Frontend (Mobile App MVP)

- iOS + Android (React Native recommended)
- Voice activation (via Whisper API or similar)
- Dashboard UI for task management

Backend / AI Layer

- Large Language Model integration (OpenAI GPT-4 or GPT-5 API)
- Task storage and context memory (Firestore or Supabase)
- User authentication (Firestore Auth or OAuth)
- Natural language processing for voice-to-text (OpenAI Whisper or AssemblyAI)

Integrations (Phase 1)

- Gmail / Outlook for email automation
- Google Calendar for scheduling
- Instacart / Amazon API for grocery and gift automation

Integrations (Phase 2)

- WhatsApp / iMessage API (for conversational integration)
 - Notion / ClickUp / Trello (for project tracking)
